

Hydrangeas

What amendments do we recommend when planting your hydrangea?

- **Amend** your soil with E.B. Stone Azalea, Camellia & Acid planting mix or Bumper Crop Organic Soil Conditioner.
- Use a **starter fertilizer** like E.B. Stone All Purpose or E.B. Stone Sure Start. Follow the directions on the bag to find the appropriate amount for the size of your hydrangea.
- For **blue flowers**, use Hi-Yield Aluminum Phosphate as recommended, and fertilize regularly with a rhododendron fertilizer. For **pink flowers**, use lime, and fertilize with a rose fertilizer.
- To **promote healthy root growth on new hydrangeas**, try Master Nursery Root Master B-1 rooting hormone!
